Accredited calibration of a built-in temperature sensor – ISO/IEC 17025

code: SLU001

Accredited calibration of an instrument with a built-in temperature sensor is performed by an external accredited calibration laboratory. The service includes the issuance of a calibration certificate.

- accredited calibration according to CSN EN ISO/IEC 17025:2018
- the results of the accredited calibration are internationally recognized under the EA MLA and ILAC MRA agreements
- calibration at 3 temperature points within the range of −40 to +600 °C is included in the price
- additional calibration points and calibration outside the standard range (down to −80 °C or up to +1300 °C) are available at an extra charge

The required calibration points must be specified in the order.
If no calibration points are specified, the calibration will automatically be performed at the standard points of 0 °C, +20 °C and +40 °C.
